

Software Distribution,  
File Replication  
and Synchronization  
for Compaq  
Himalaya Systems

ESCORT ♦ AUTOSYNC™

## AUTOASYNC PRODUCT FEATURES:

- Flexible scheduling of automatic synchronization
- Manual synchronization for ad hoc file transfer
- Data compression for remote synchronization
- Flexible options to control file access security, file purging, archiving of replaced files
- Management of multiple users with appropriate file security control
- Reliable: uses NonStop technology to continue replication despite CPU failure
- Scalable: parallelizes processing load

## USE AUTOASYNC TO SYNCHRONIZE THESE TYPES OF FILES:

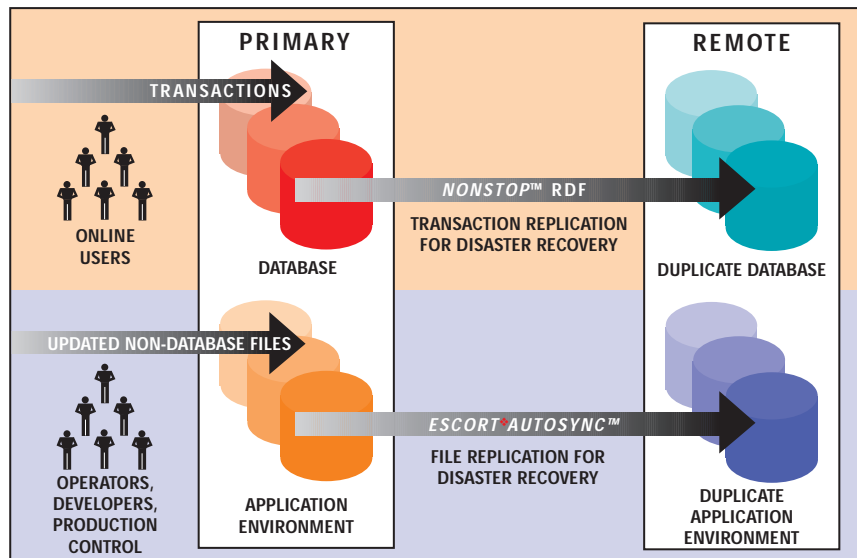

- Edit
- Object
- Source
- Pathway Control
- Macros
- Special usage files
  - Message files
  - BLOBs
  - Report files
- Batch Command
- Startup
- Obey
- Many more...

# Escort<sup>™</sup> AutoASYNC<sup>™</sup> provides synchronization of your applications

Escort<sup>™</sup> AutoASYNC<sup>™</sup> addresses the needs of Compaq Himalaya customers to maintain copies of files that cannot be replicated by Compaq RDF or similar software products. Although Escort<sup>™</sup> AutoTMF (or Compaq NonStop AutoTMF Software) now allows customers to audit and replicate database files that were previously unaudited, there are still a large collection of files for which auditing is impractical. Such files include program object files, program source files, control files, TACL macros and obey files for configuring and controlling the applications, and a host of other miscellaneous files that are required to execute your applications.

AutoASYNC provides an automated facility that synchronizes source and destination file sets whenever a file in the source file set changes. Once the user has configured the files to be synchronized, AutoASYNC is fully self-tending and fault-tolerant; it requires no additional operator interaction. Using both streaming technology and data stream compression, AutoASYNC makes efficient use of the available bandwidth between the source and remote systems.

*AutoASYNC complements Compaq's RDF and other disaster recovery products. Use AutoASYNC to replicate unaudited files, such as object, Edit, configuration and other files.*

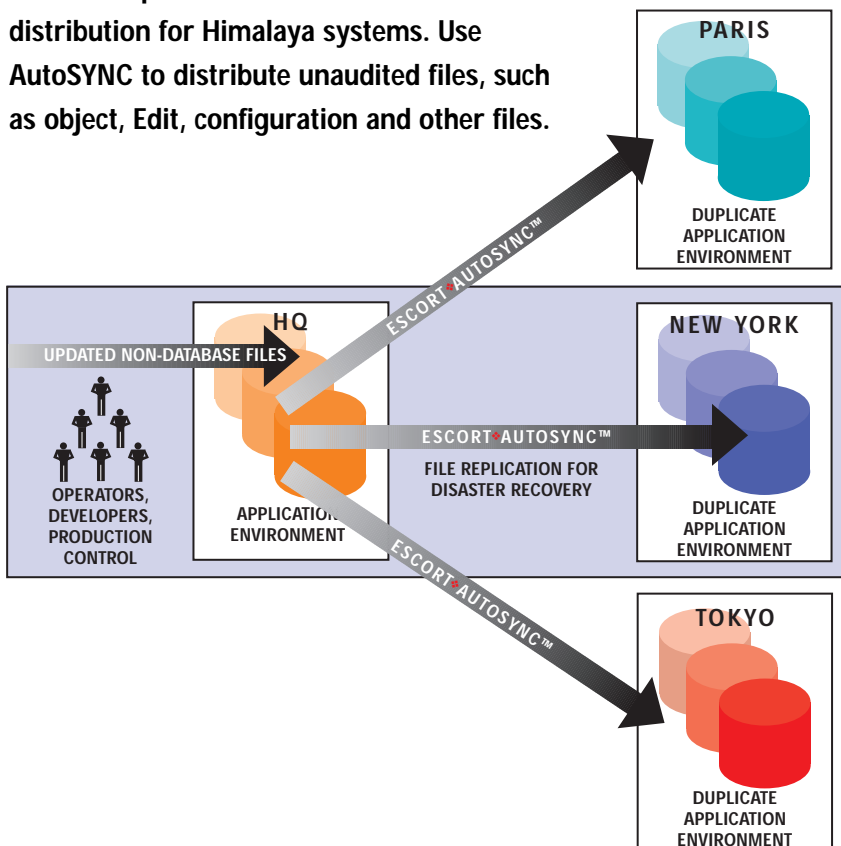

# Provides automatic replication, distribution and applications environment and other non-database files.

Managing mission critical systems requires precise coordination of your applications environments. Distribution of source and object files is only the beginning. Ensuring that correct versions of Macro, Obey and Pathway control files ensure that you can bring up the applications in the proper environments. Replication and synchronization of these environments is precisely the focus of AutoSYNC. AutoSYNC allows Compaq Himalaya customers to replicate files that are necessary for the remote systems and it will ensure that they are in place on the remote systems when needed.

**Escort♦AutoSYNC**  
provides automatic  
replication for all your  
non-database files

**AutoSYNC provides automatic software distribution for Himalaya systems. Use AutoSYNC to distribute unaudited files, such as object, Edit, configuration and other files.**

Whether you need to provide complete disaster recovery support or software distribution for your Himalaya systems, Escort♦AutoSYNC provides a vital link in ensuring your systems are prepared for your business.

# ESCORT ♦ AUTO SYNC™

Automatic replication and  
synchronization for all  
your non-database files.
